Keyless relaxation – with SAFE-O-PIN® coin deposit locks

It is hard to imagine changing rooms in sports and swimming facilities without coin deposit locks. Ever since the development of SAFE-O-MAT® in the 1960s, visitors have been able to select and secure a locker with no staff intervention and then to open it again. By just putting your key, on its armband, back into the lock, your coin deposit is returned. This ensures that keys are returned and that the locker is immediately available for the next user.

With the newly developed SAFE-O-PIN option, keys and armbands are now redundant. Visitors put their belongings into a locker of their choice, inserting the coin deposit in the lock as usual, enter a PIN code and lock the door. So while relaxing in the pool facilities, there is no key or armband to spoil the fun. Hygiene hazards and the risk of injury are also now a thing of the past.

Having to insert a coin prevents pranksters occupying lockers and making them unavailable to others. To open the locker, users just enter the PIN code, and the coin can be removed. If the permitted period of use has expired, the coin can be retained by staff as a fine.

Other benefits: There are no ongoing costs for replacement keys and locks, nor for armbands and other accessories, not to mention the saving in time. The wireless PIN code locks, with their own extended-life power supply, are compatible in size with SAFE-O-MAT® coin deposit locks and so can be easily retro-fitted.
