SAFE-O-TRONIC[®] access locker lock nominated for the German design prize

The electronic locker lock SAFE-O-TRONIC[®] access from SAG, which only recently received the red dot award: product design 2010, has now been nominated for the highest-ranking official German design award: the Design Prize of the Federal Republic of Germany.

In contrast to other design competitions, it is not possible to apply for nomination for the Design Prize of the Federal Republic of Germany. Participation is open only to products which have already been awarded a national or international prize; these can then be nominated by one of the economics ministers and senators of the German Federal states or by the German Federal Ministry of Economics and Technology. "We are delighted to have been nominated for this prestigious design award", says Frank Speer, head of SAG's Intelligent Locking Components division. "The clear, structured and functionally oriented design of our SAFE-O-TRONIC[®] access locker locks conveys high-quality and precise workmanship that corresponds to our corporate philosophy. Material authenticity, proportions and texture contrasts underline the aspirations of this durable high-end product."

With SAFE-O-TRONIC[®] access, Schulte-Schlagbaum AG, in cooperation with its development partner FEIG Electronic, based in Weilburg, is setting new standards in the securing and organisation of lockers, safe deposit boxes and functional furniture. The PIN code and RFID smartcard technology are combined in a unique way. Thanks to trendsetting NFC technology, it is even possible to use these installations by mobile phone. The innovative combination of no fewer than three identification technologies (PIN code, RFID and NFC) in one and the same locker lock makes SAFE-O-TRONIC[®] access particularly attractive for facility operators. They can, for example, adjust flexibly and in a cost-saving way to changing locker users at any time: club members lock the locker with, for example, their RFID ID, one-day guests with their PIN code und VIPs using their mobile phones.
